

assistant.bd

How to use it - in 10 screenshots

Set up an AI assistant for your business in under 5 minutes.

No code. No technical knowledge required.

assistant.bd Sign in [Get started free](#)

↔ No code. No setup call. Ready in 5 minutes.

Your own AI support agent. Live on your site today.

Answer customer questions 24/7 with an assistant that knows your business, your prices, and your policies. Paste one line into your website — or share a link — and it starts working immediately.

[Start free — no card](#)

Set it up in 4 questions. No prompts to write. No code to touch.

 **One line on your website**
Copy a single script tag into Shopify, Wix, Webflow, WordPress — anywhere. A floating chat bubble appears instantly.

 **Or share a link / QR code**
Put it in your Instagram bio, your business card, table tents, receipts. Anyone can chat with your assistant in one tap.

 **You stay in control**
Every conversation lands in your inbox. Watch the AI handle the easy ones. Take over the hard ones with one click.

 **Stop losing customers to slow replies.**
Set up your assistant in the next 5 minutes. It answers while you sleep.

This is what your visitors see at assistant.bd. Click Sign in to create your account (email + password, or Google).

Step 1 - Tell it about your business

✦ Set up your AI assistant — takes 2 minutes

What's your business?

Your assistant will introduce itself with this name.

Business name

Nabila's Boutique

What do you do? (one sentence)

Handmade silk sarees, shipped worldwide from Dhaka.

Website (optional)

https://nabila.shop

← Back

Continue →

After signing in, the 2-minute wizard opens. Type your business name, a one-line description, and (optionally) your website. Your assistant will introduce itself using this name.

Step 2 - Pick what it should handle

🔧 Set up your AI assistant — takes 2 minutes

What should it help with?

Pick everything that applies.

Answer product & service questions

Use the knowledge below to answer FAQs about pricing, features, hours, and policies.

Take leads & book appointments

When someone shows buying intent, collect their name, email, and preferred time. Save it to the customer record.

Help with order & shipping status

When asked about an order, ask for the order number or email, then look up the customer profile.

Hand off to a human when stuck

If you cannot answer confidently, use the `escalate_to_human` tool.

← Back

Continue →

Tick every job you want the assistant to do - answer FAQs, capture leads, handoff to you, and more. You can change this any time.

Step 3 - Give it a personality

🔧 Set up your AI assistant — takes 2 minutes

Give it a personality

And paste anything it should know.

Tone

Friendly

Warm, first-name basis

Professional

Clear, concise, no slang

Playful

Upbeat with light humor

Anything it should know? (FAQs, hours, pricing, policies)

We ship worldwide within 3-5 days.
Returns accepted within 14 days.
Opening hours: 10am-8pm Sun-Thu.
...

When it can't answer...

Flag it and let me take over from the inbox

Ask for their email and promise follow-up

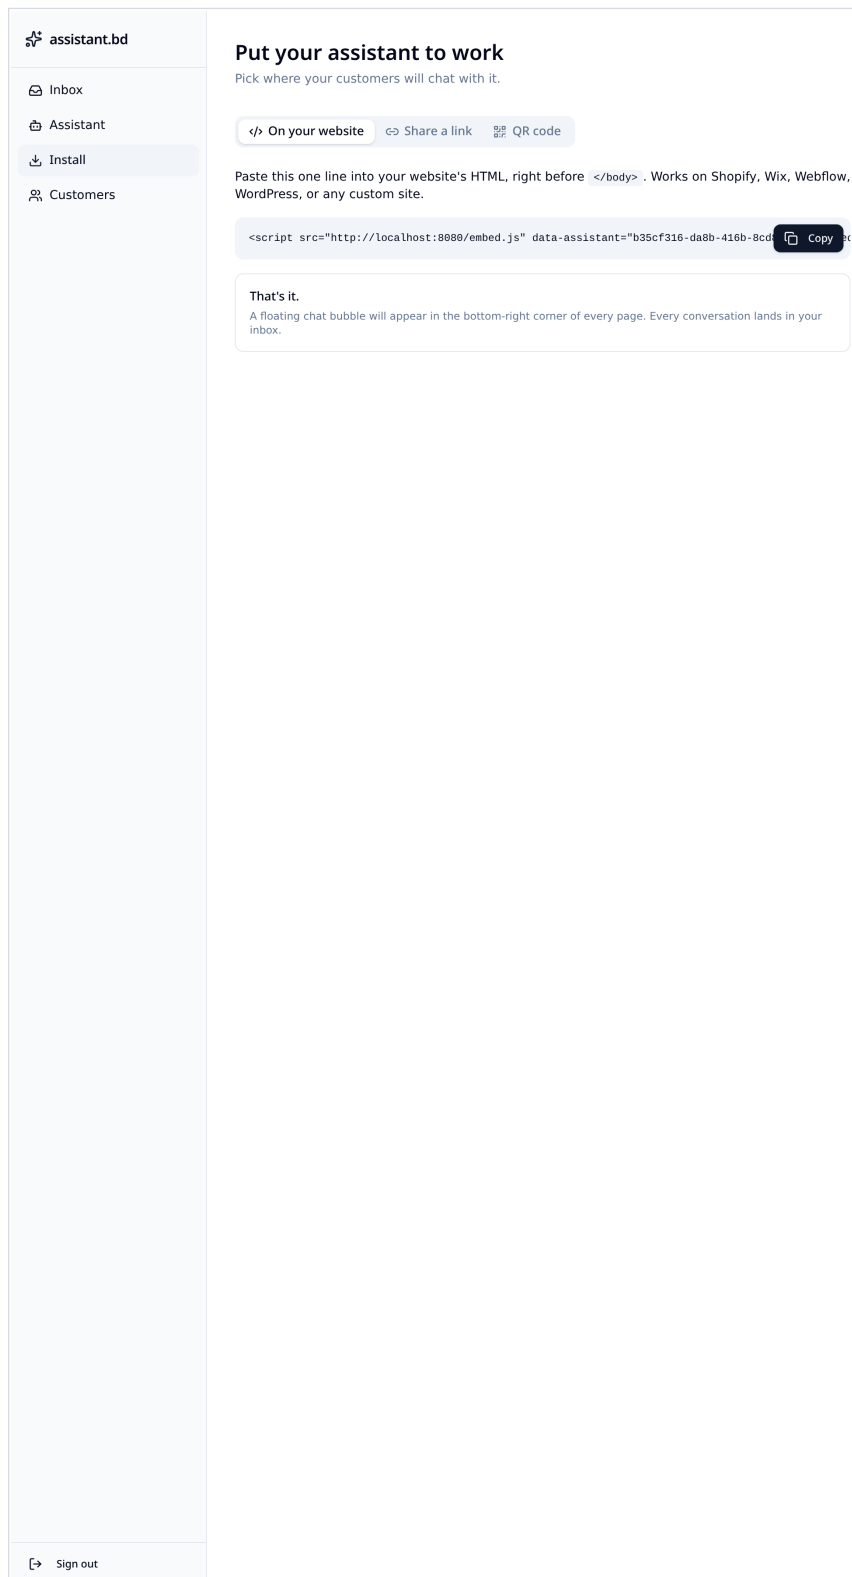

Just apologize and suggest they contact us directly

← Back

Create my assistant →

Choose a tone (Friendly / Professional / Playful), paste anything it should know (hours, pricing, policies, FAQs), and pick a fallback for when it can't answer.

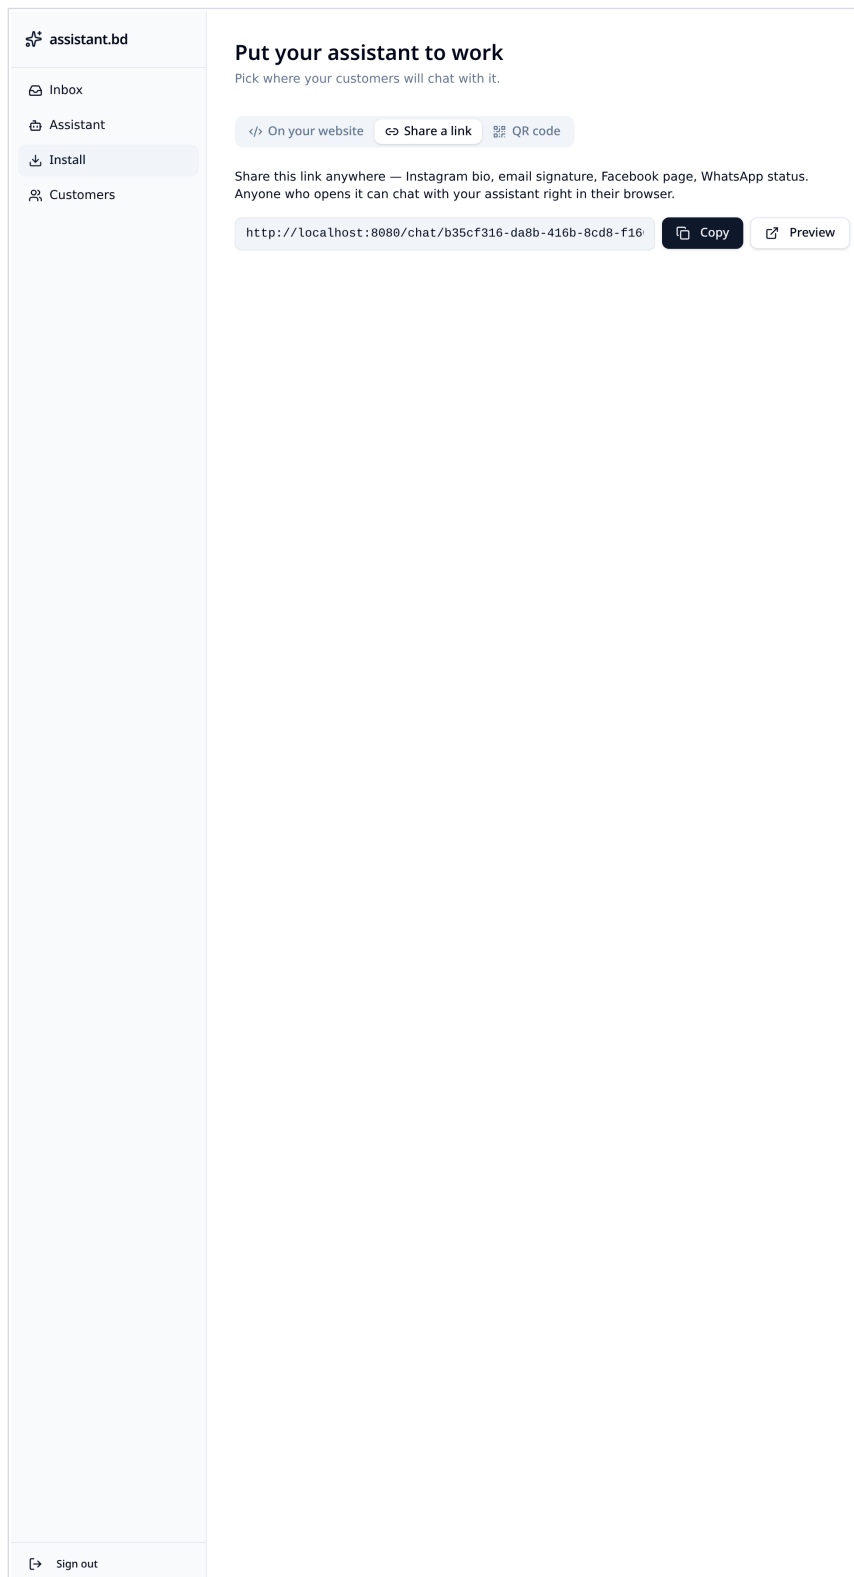

Install - on your website

The screenshot shows a web interface for installing a chat assistant. On the left is a sidebar with the logo 'assistant.bd' and navigation links: 'Inbox', 'Assistant', 'Install' (highlighted), and 'Customers'. At the bottom of the sidebar is a 'Sign out' button. The main content area is titled 'Put your assistant to work' and includes instructions to pick a chat location. Three options are shown: 'On your website' (selected), 'Share a link', and 'QR code'. Below these, a text box instructs the user to paste a line of HTML code into their website's HTML, right before the closing body tag. The code is: `<script src="http://localhost:8080/embed.js" data-assistant="b35cf316-da8b-416b-8cd" >`. A 'Copy' button is next to the code. A final section titled 'That's it.' explains that a floating chat bubble will appear in the bottom-right corner of every page, and all conversations will land in the user's inbox.

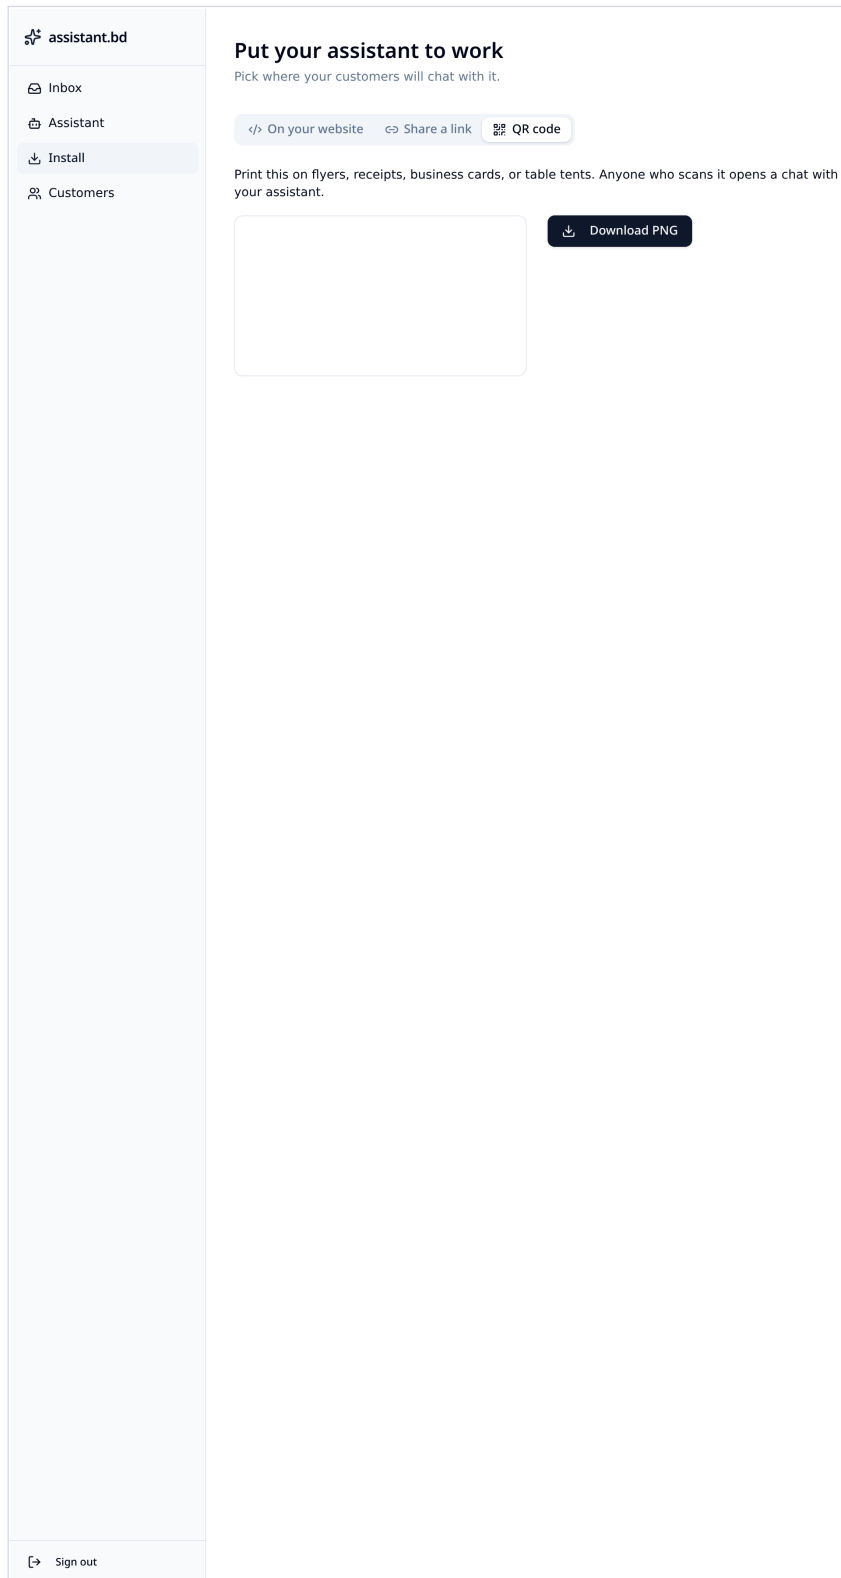

Copy one line of HTML and paste it before `</body>`. Works on Shopify, Wix, Webflow, WordPress, or any custom site. A floating chat bubble appears in the bottom-right of every page.

Install - share a link

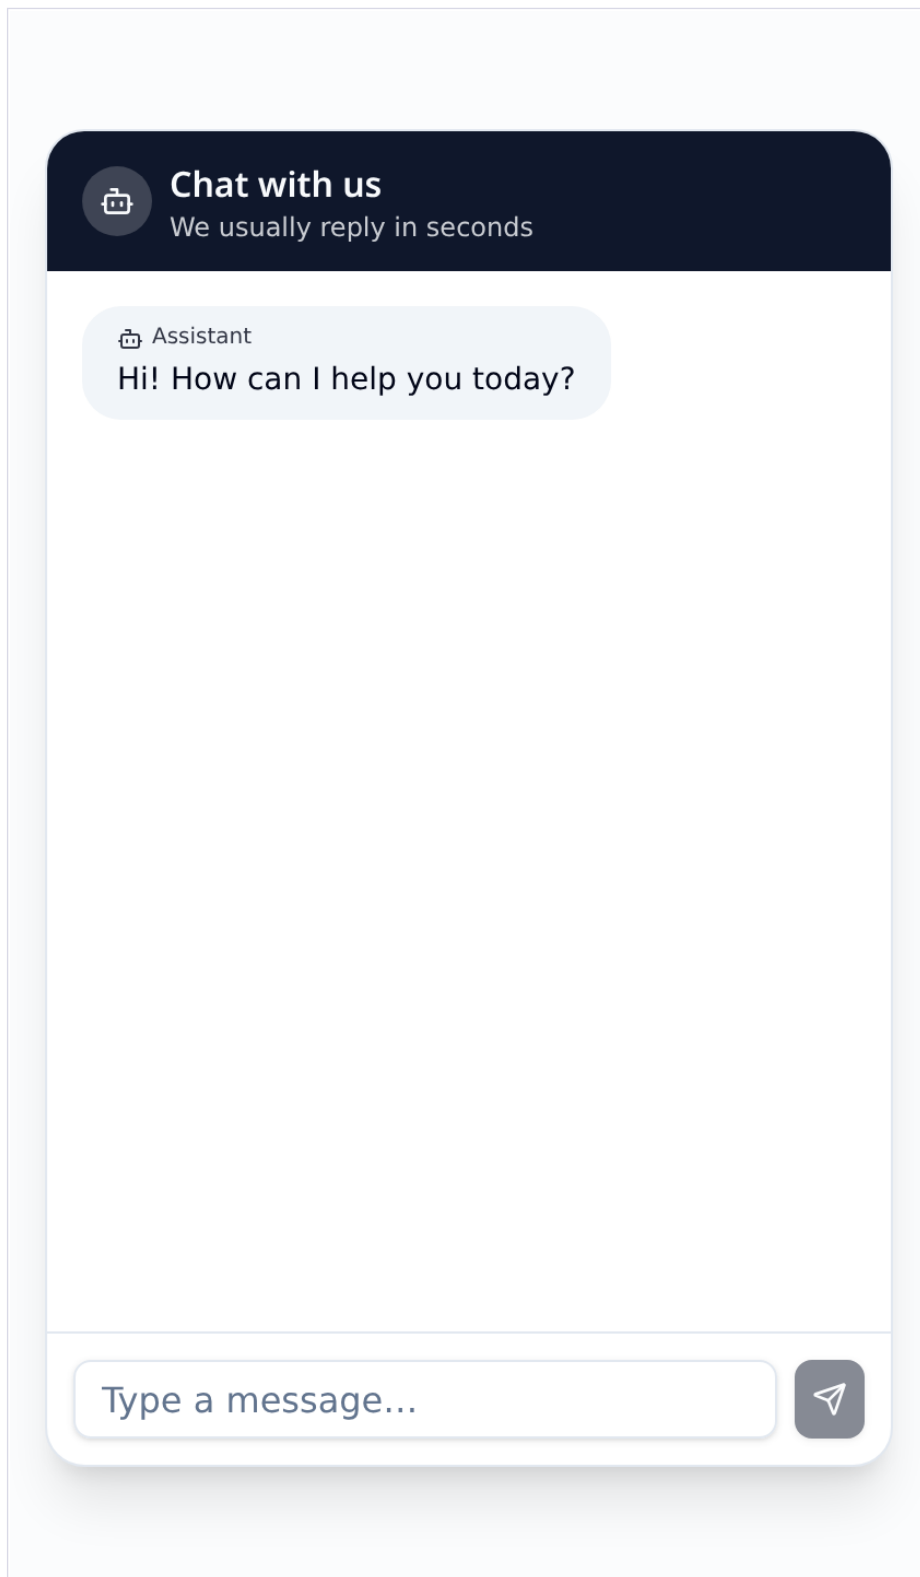

No website? Share the direct link on Instagram bio, email signature, Facebook, WhatsApp status. Anyone who taps it chats with your assistant right in their browser.

Install - print a QR code

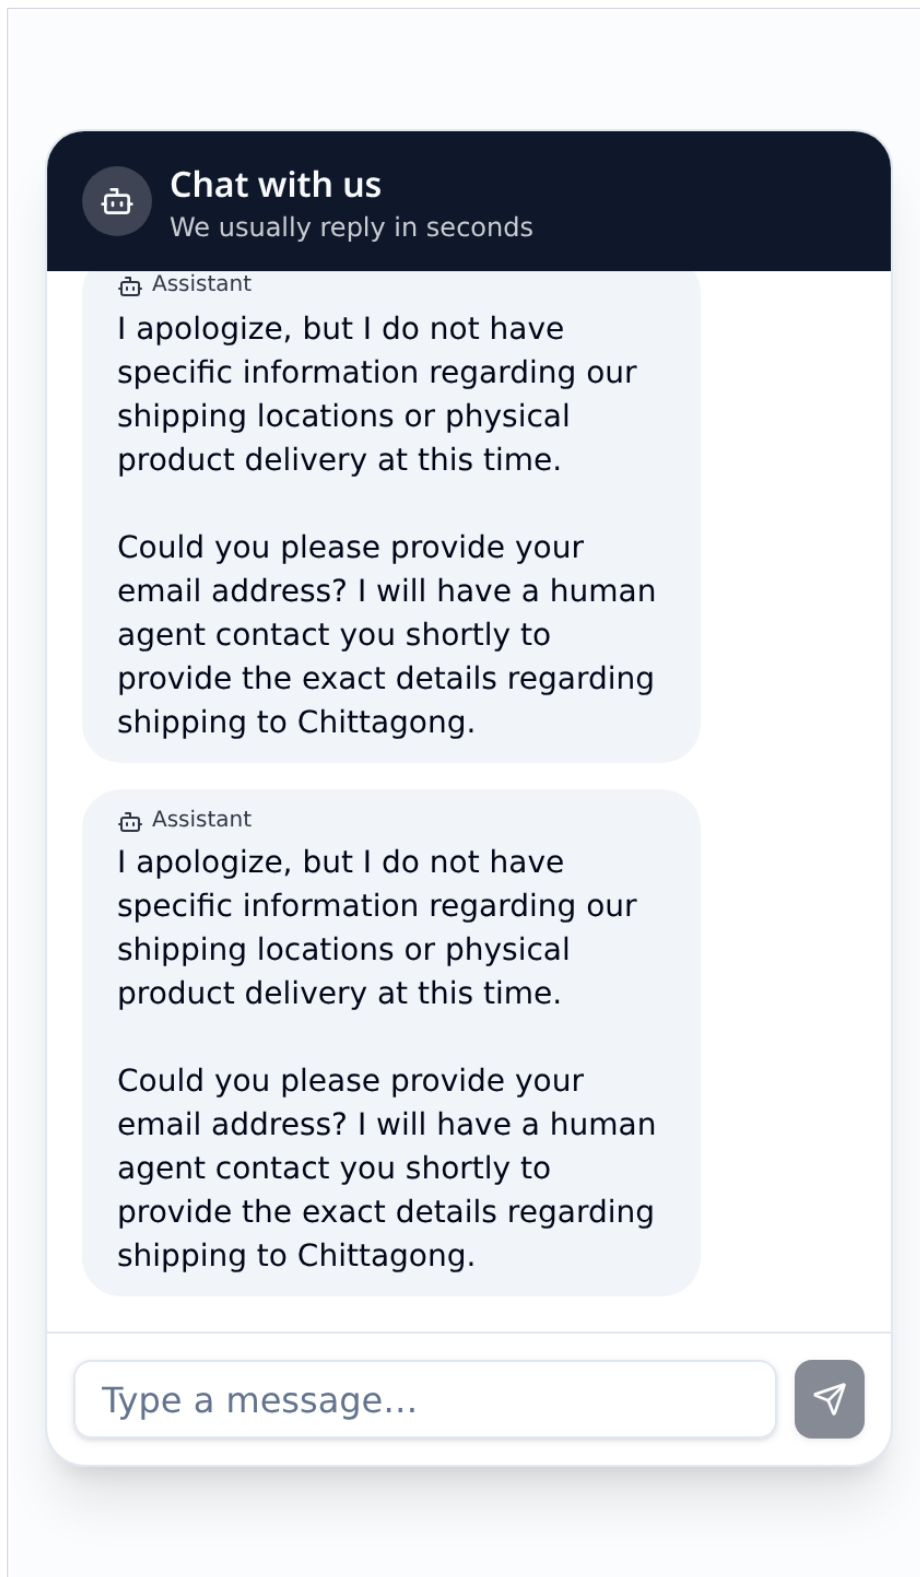

Print the QR on flyers, receipts, business cards, or table tents. Scanning opens the chat instantly.

The visitor's view

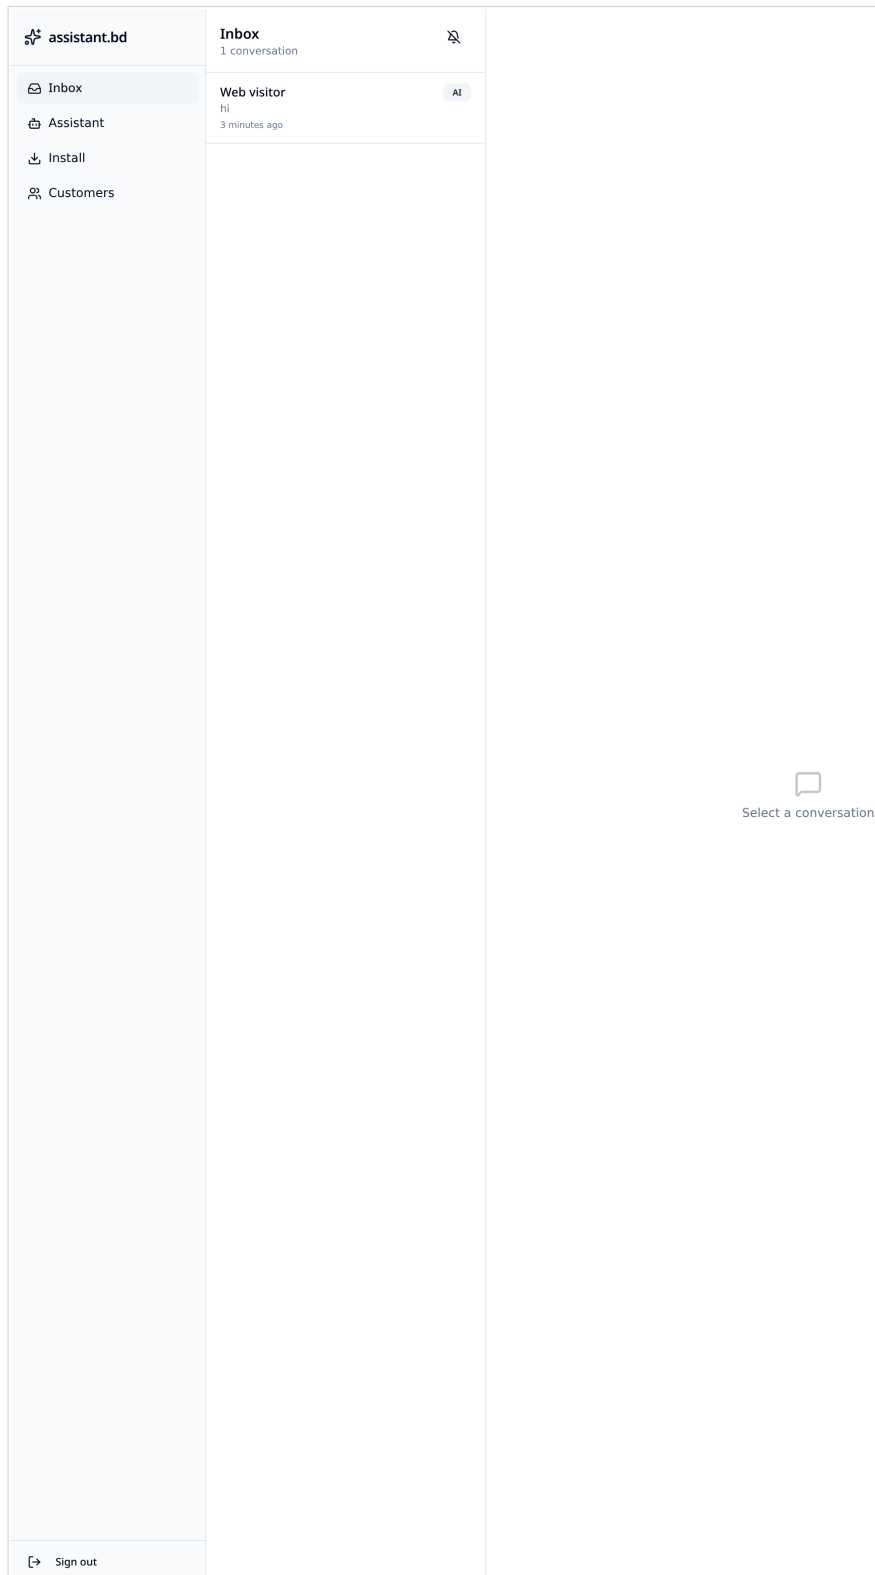

This is exactly what your customer sees - a clean chat window branded as Support. They just type.

The AI answers on its own

The assistant replies within seconds using the knowledge you pasted. Every conversation is saved.

Your inbox - every chat, live

Open the Inbox to see every conversation. Click Take over to jump in as a human at any moment - the visitor sees a green Support agent bubble and knows a real person is helping.

That's it. You're live.

Every message from every channel lands in one inbox.

You take over any conversation with one click.
